# EVALUTION OF MY OWN PERFORMANCE

In this eBook, I included much information for every topic and also I added my own experiences for some topics to provide a good overall picture. I added multimedia to make the eBook much attractive to the user and also I used more images and animations to the eBook. I can sure that I had put enough information into this ebook, so the reader can have a good picture of what I was talking about.

I used Microsoft Excel to made schedules for each section of this eBook. So it helped to finish this project on time. I came throughout struggles as my web designing knowledge is not sufficient to make this ebook a better one; even I had good knowledge of HTML. Therefore I learned CSS and javascript by myself. As a result, I was able to make my ebook easily. Also, I gathered issues made by previous students on their ebooks, to make my ebook better one. I took many pieces of information from a variety of websites and also edited some images by using Picasa photo editor tool. I included the entire source records that I took from the internet on the bibliography which is available at the end of the ebook. By developing this ebook I learned how to manage time and also I was able to improve my web designing skills too.After finalizing this ebook, I think I did a great job.

Below screenshot shows a comment that I received from one of my friends

After reading the above comment I was really satisfied with my overall work as I worked hard to make this ebook a better one.
